Inposition

The Inposition positioning belt is designed for work positioning and prevention of falls from a height. The belt is designed to be easily integrated into Interspiro's SCBA sets QS II and Spiroguide II and to safely secure the user without the need for an additional belt.

For firefighting purposes, the use of QS II or Spiroguide II SCBA sets equipped with the Inposition belt can follow the same routines as for SCBA sets with the standard waist belt. Existing QS II or Spiroguide II SCBA sets can easily be upgraded with the Inposition belt, as its design is fully integrated in the design of the SCBA.

- Heat resistant Kevlar webbing
- Metal quick connect buckle
- Stainless steel adjusters
- Two attachment D-rings
- Pull-forward waist adjustment
- Pouch for lanyard
- Easy attachment to harness backframe

The Inposition positioning belt is tested according to both EN 137 "Respiratory protective devices" and EN 358 "Personal protective equipment for work positioning and prevention of falls from a height". The Inposition positioning belt is designed to take up a greater load than a standard waist belt to fulfil EN 358.

The Inposition equipped SCBA can be combined with different face mask and breathing valve models which are presented under “Firefighting/Face Mask”.
The Inposition equipped SCBA variants include the pouch but exclude lanyard and they exclude face mask, breathing valve and cylinder.

Technical specification

Approval : 89/686/EEC

Standard : EN137

Standard (2) : EN358
