

Spiroline MP Supply hose

The Spiroline system is suitable for maintenance and rescue work in confined spaces where conventional breathing apparatus would make access difficult. It also provides a convenient way to perform decontamination procedures and search and rescue operations.

The medium pressure supply hose has one male and one female connection. Variants available with connection type "Interspiro" and connection type "Euro". The "Interspiro" type female connector is equipped with a locking ring to secure the connection.

Optional lengths range from 5 meters up to 30 meters. Two hoses may be connected together for a maximum overall length of 60 meters.

Technical specification

Connection : Interspiro male

Connection (2) : Interspiro female

Dimensions : Diameter - inner 9.5 mm, outer 18.5 mm

Material : EPDM

Material (2) : Textile reinforcement

Standard : EN 139
